Tried and tested, and now with added value

SLK 3 innovations in polycarbonate and with LINECT interface

Innsbruck, 02.02.2012. **The new power supply connectors for light fittings of the SLK 3 and SLK 3 LINECT series made by Tridonic connection technology are technologically outstanding.**

The SLK 3 luminaire terminal block has been tried and tested time and again. The use of polycarbonate has now increased its UV resistance and the revised geometry of the snap lock for the attachment of the SLK 3 terminal block to the luminaire plate improves ease of fixing.

The new SLK 3 linect luminaire terminal block has now been added to the SLK 3 range. It has an interface to which both conventional installation cables as well as building installation plugs from different manufacturers can be connected. Especially the manufacturers of ceiling-recessed luminaires will therefore benefit from the SLK 3 linect terminal block, as just one type of lamp is needed for all types of installation.

About Tridonic connection technology

BETTER CONNECTIONS – this phrase sums up our work stretching back more than 45 years on tailor-made connection technologies for the lighting industry, the household appliance industry and the installation technology sector. And we have enjoyed considerable success. Today, the Innsbruck-based company supports customers in more than 60 countries throughout the world. Individuality, quality and globality – this is the framework in which Tridonic connection technology is now a global player with the exceptional ability to offer the right product solutions. Founded by Dr. Walter Zumtobel and Ferdinand Rojkowski as Electro-Terminal in 1964, the company belongs now to Tridonic, a division of the Zumtobel Group, and has 110 employees.
